

Ideation Phase

Define the Problem Statements

Date	22 June 2026
Team ID	
Project Name	Software Installation Request Automation
Maximum Marks	2 Marks

Final Problem Statement:

I am an employee trying to request and get software installed quickly, but the process is manual, untracked, and slow, because there is no centralized system or structured workflow, which makes me feel frustrated and unsatisfied with IT service delivery.

Solution:

The Software Installation Request Automation in ServiceNow solves this by providing a standardized Service Catalog item, automated approval workflow via Flow Designer, and auto-created fulfillment tasks — giving employees full visibility and faster service.
